

Space Needle

Seattle, Washington

The Space Needle is one of the most famous sights of Seattle. It is an observation tower which was built in 1962.

It has an observation deck and the rotating Sky City restaurant. It is 184 meters high and you can see the skyline of downtown Seattle.

The Space Needle was built for the World Fair in 1962 like the Eiffel Tower, which was built in 1889 , also on the occasion of the World Fair.

The architect was inspired by the Stuttgart TV Tower.

There is a high earthquake stability because the foundation weighs 5850 tons.

We went to the Space Needle for about two hours. The view was amazing.

First when we arrived, we got information about the history of the Space Needle. Then we took the elevator to the observation deck. There we walked around and enjoyed the view and took a lot of pictures.

Inside the observation deck is a café and an interactive exhibition. That was interesting and we learned a lot.

At the end, we went to the Space Needle shop which is in the exit.

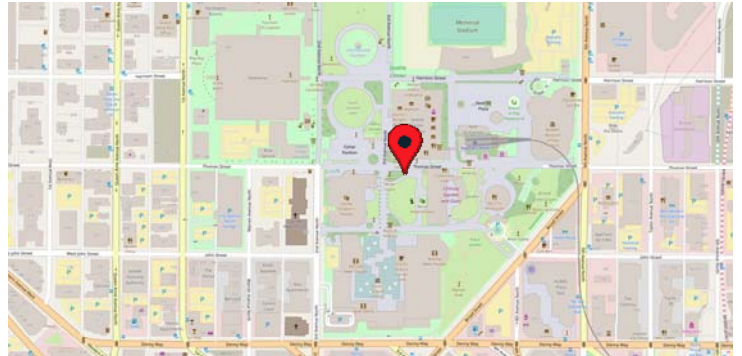

Conclusion:

We visited the Space Needle for about two hours and we loved the beautiful view and the interesting interactive exhibition.

But the Space Needle is very popular and so there were many people and it was crowded.

We think, that the Space Needle is a sight for everybody, because it is interesting something you can't see everywhere and you can see Seattle from a bird's perspective.

We can recommend it and would visit it a second time especially because of the view!

building

47°37'13.44

-opening hours: 10:00 - 21:30 o'clock

Linear distance to Wenatchee 153,18 km

- admission: Regular (ages 13-64) starting at 22 \$ Senior (ages 65+) starting at 19

Youth (ages 5-12) starting at 14 \$
